[Hiring Manager Name, or "Hiring Team"]

[Company Name]

Dear [Hiring Manager Name / Hiring Team],

I'm writing to apply for the [Role Title] position at [Company Name]. I'm a Software Engineer with 4+ years of experience building web, mobile, and backend systems for booking, logistics, and payment platforms, and [one sentence on why this role or company caught your attention].

At Klone, I build and maintain production web and mobile applications for a booking and reservation platform serving customers, vendors, and administrators. I own two React Native apps, a customer app and a vendor app, and have built end-to-end booking workflows covering search, checkout, and QR-based ticketing, along with authentication, real-time communication, and push notifications across web and mobile.

Before that, I led engineering at RUN Technologies, a logistics platform, where I worked across the full stack, React, Next.js, Laravel, Node.js, and NestJS, to build order management, wallet and checkout, rider assignment, and GPS tracking systems. During that time the platform scaled significantly in order volume and rider network, and I built the REST APIs, authentication systems, and third-party integrations that supported that growth. I've also worked on frontend for a payment platform at Spout Payment, building merchant dashboards and interfaces for live payment operations.

I'm comfortable moving between frontend and backend work, and I enjoy taking a feature from a product requirement through to something running in production. I'd welcome the chance to talk about how my experience could contribute to [Company Name]'s team.

Thank you for your time and consideration.

Sincerely,

Adeoye Solomon Oluwatobi
